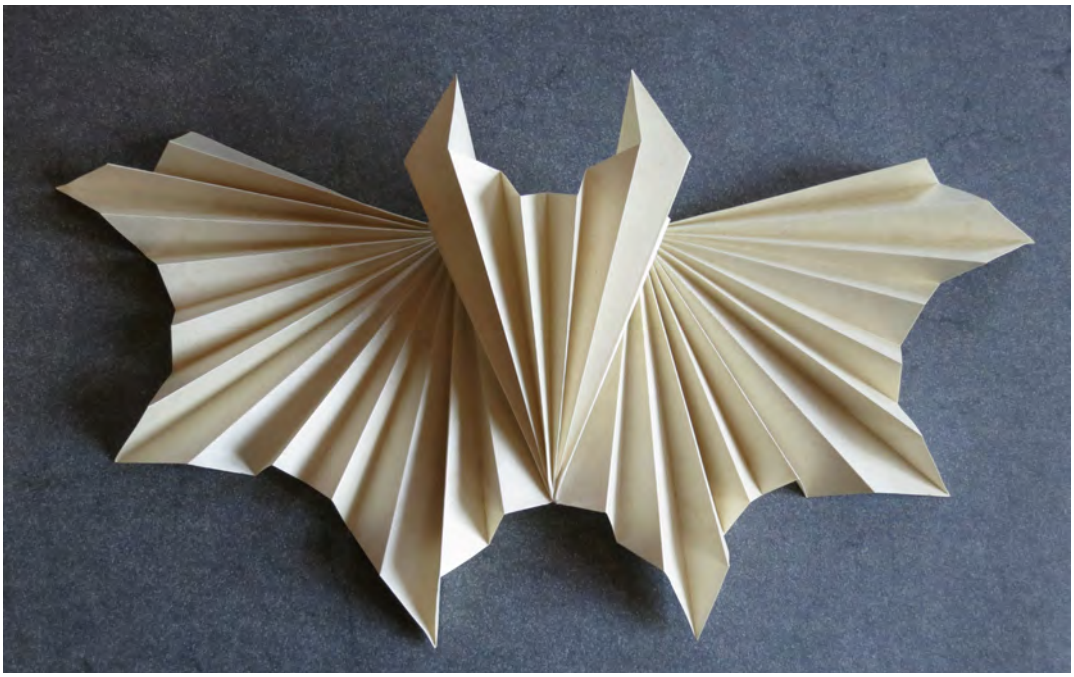
Vespertilio



Vespertilio was designed and conceived by Ioana Stoian during the 2012 origami meeting in Freising, Germany. Using a 2 x 1 rectangle, simple radial pleats, and three cuts, this model comes to life and takes flight!

A thicker paper such as 110gsm Elephant Hide is suggested, as it has structural qualities that perform well with three-dimensional models like this one.

The crease pattern is simple; follow the photos for additional information about the recommended folding sequence.
