Simple Closed-back Octagon Twist

This is yet another octagonal twist. It's really just a simple closed-back octagonal twist, with some detailing around the edges to clean up extra paper. The crease pattern is quite straightforward, and while the folding sequence to get all the relevant reference folds is not very hard I'm not quite ready to document all that at this time.

Give it a try, and be the first person on your block to have octagonal ninja throwing stars! Or perhaps use it as a name tag for Christmas or birthday presents? The possibilities for cute little folds are endless.

Everything I release is available online at http://www.origamitessellations.com.

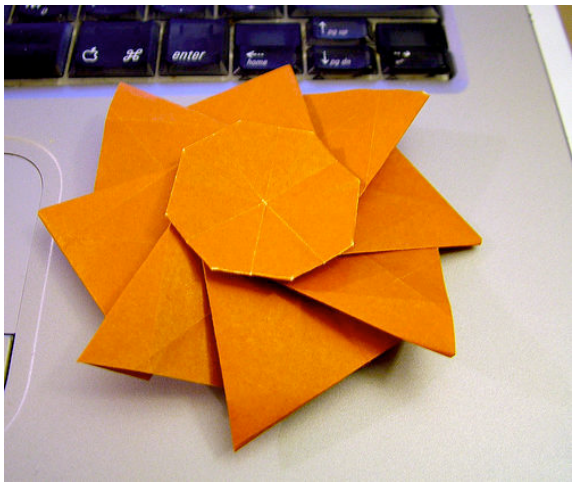
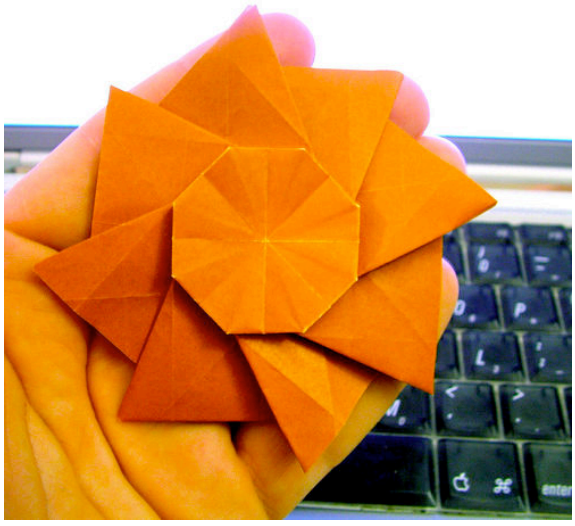
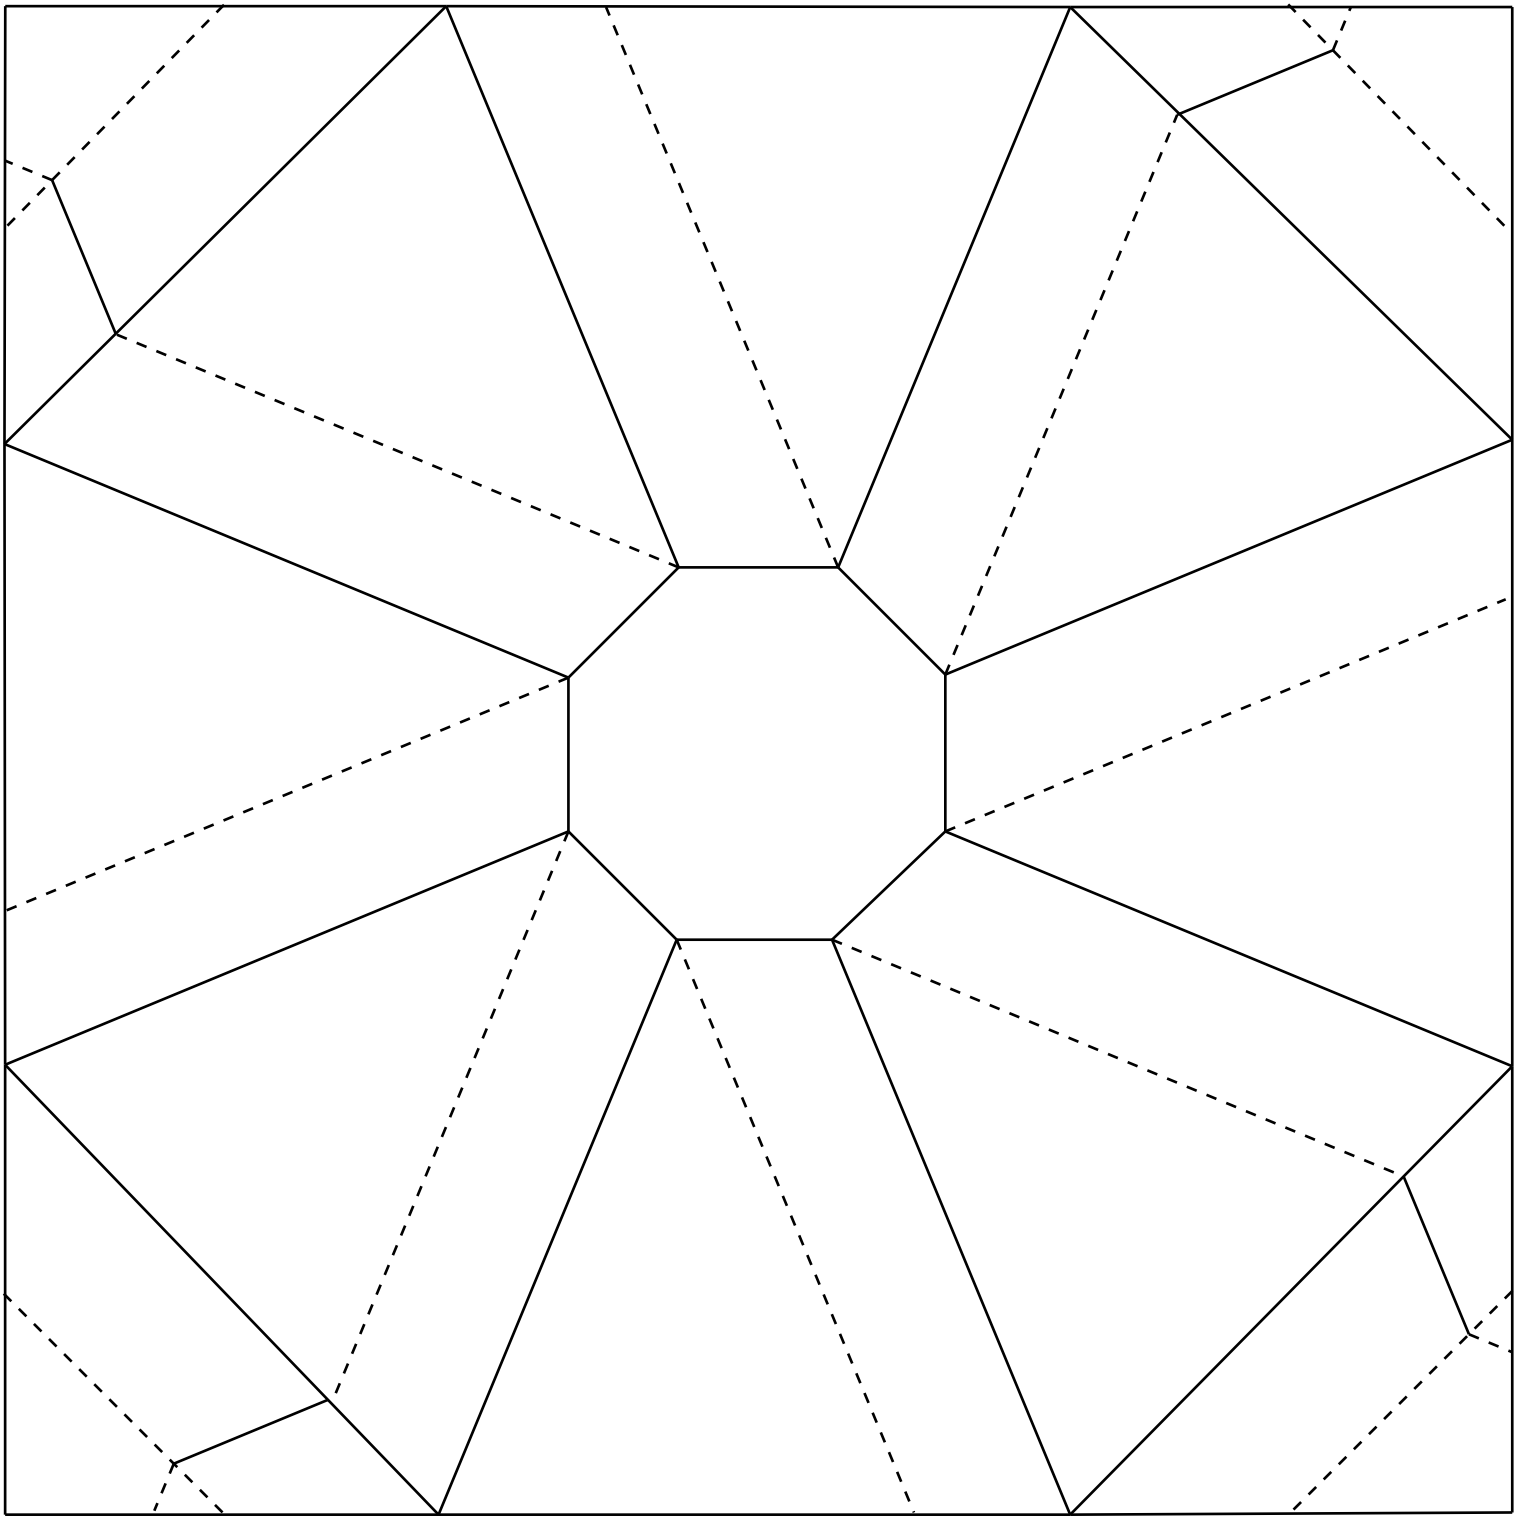
I would suggest actually tucking the non-folded end of the flaps under the next section going around (see circle). I didn't do that in this photo, but it looks better when it's done that way.



The finished model. it's just a really simple little thing, but it's kind of cute. you can build on this basic shape and get more complicated models from it quite easily.





Eight sides of fun!
