

Spread Hexagon Tessellation

Note that all the pleats have the same direction:

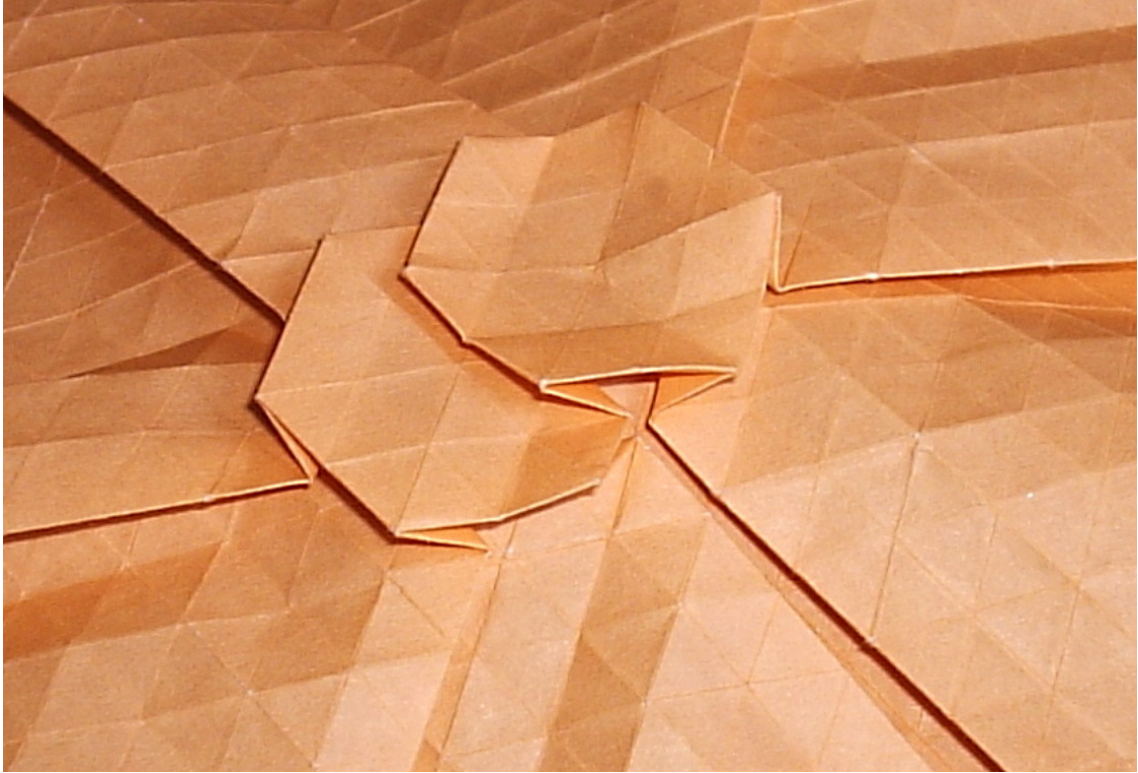

On the picture above, you fold one of the pleats to the other side so it's easier to fold the next hexagon.

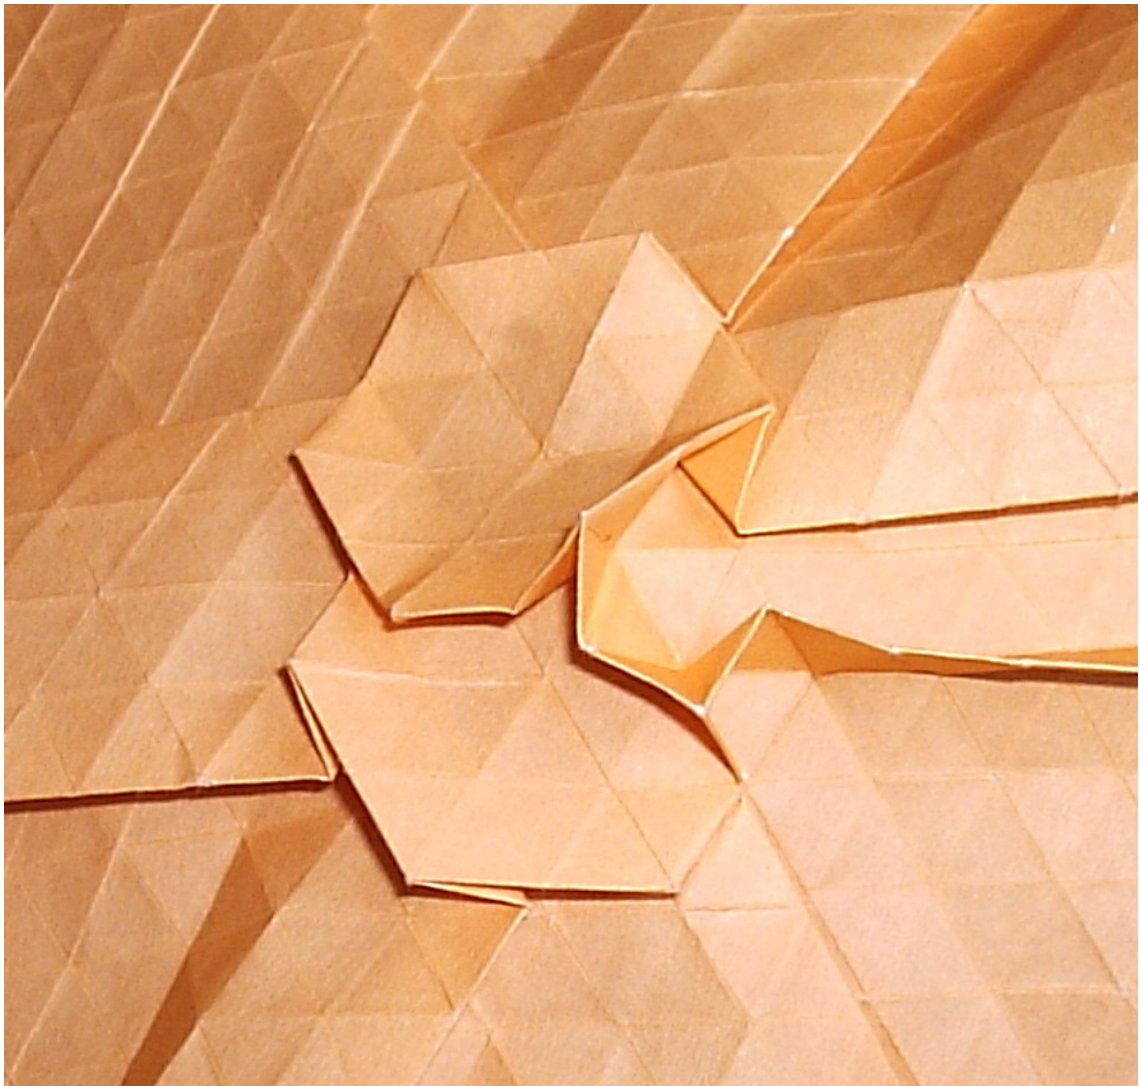

* prega invertida = inverted pleat

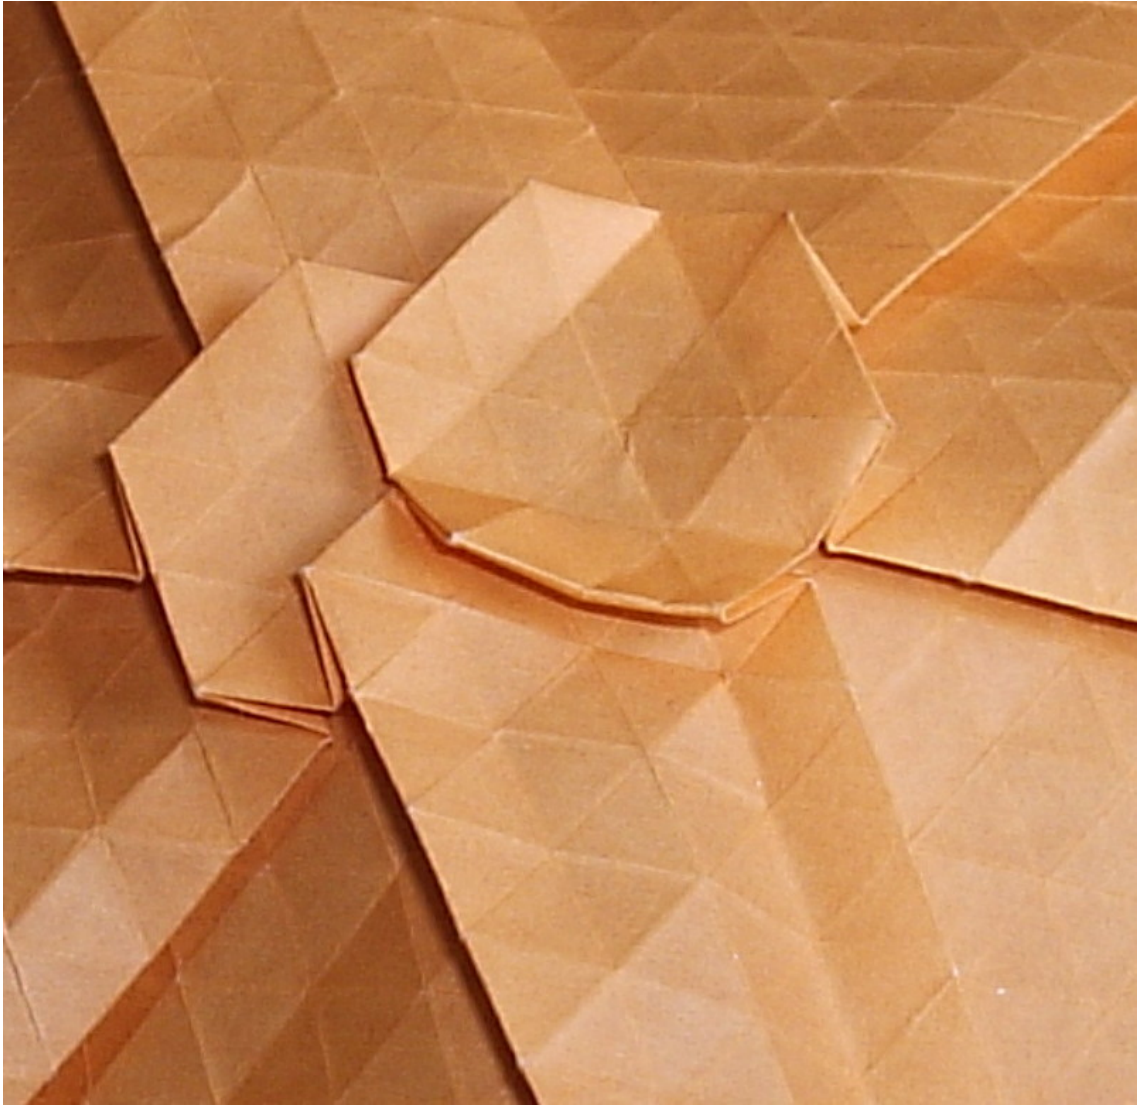

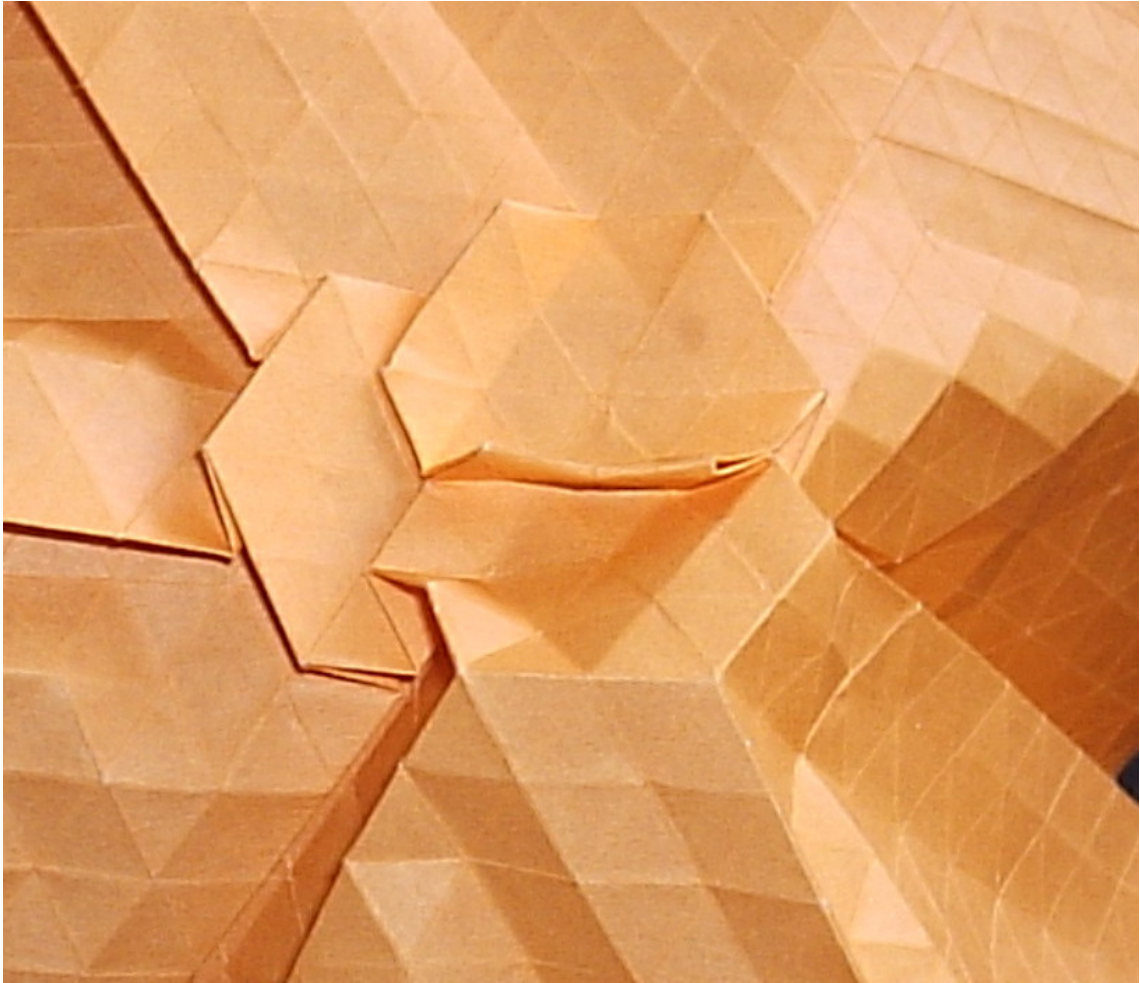

* hexágono inicial = first hexagon

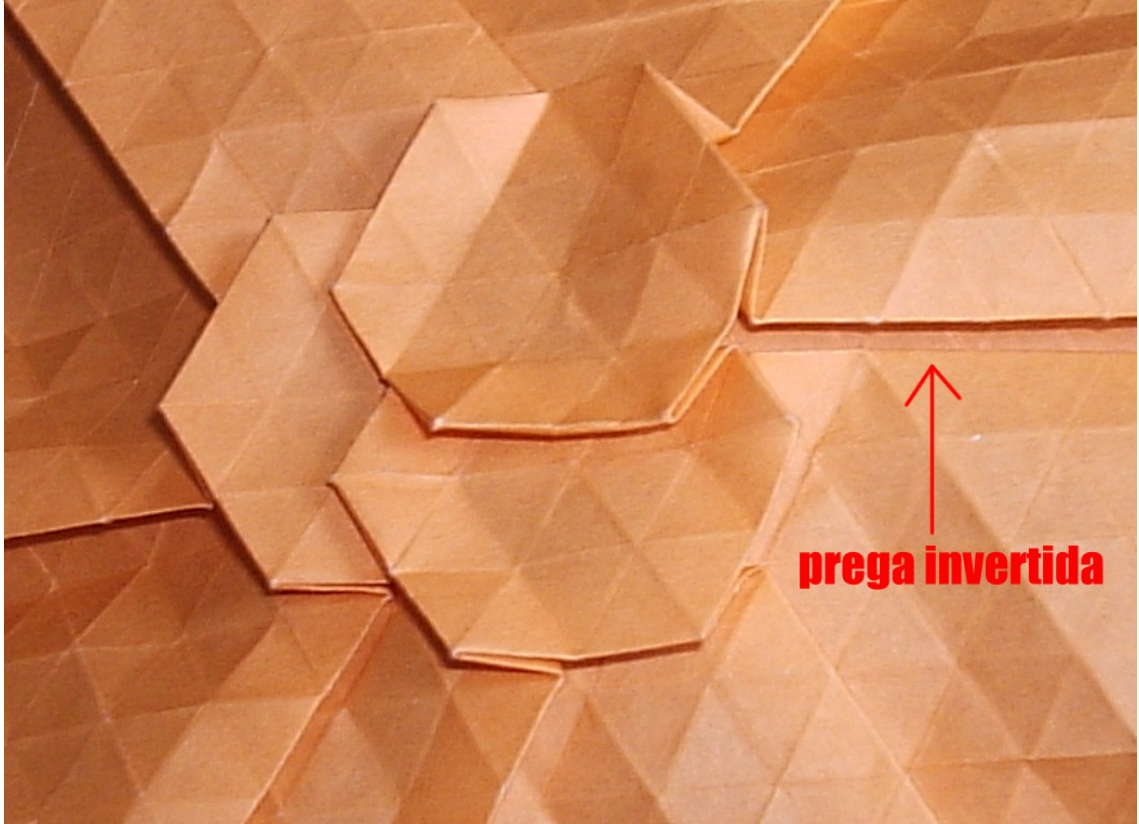

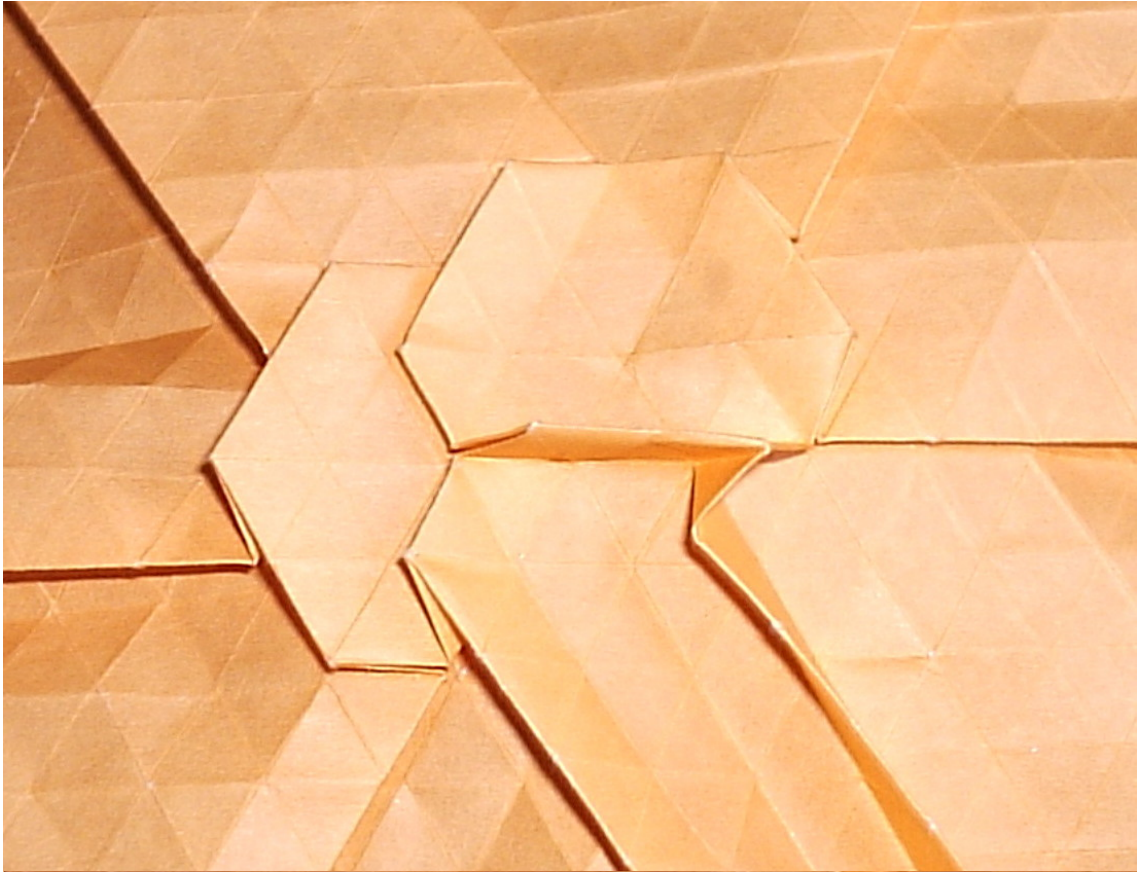

Second hexagon ready. Now you have to invert one side pleat from the hexagon you just folded:

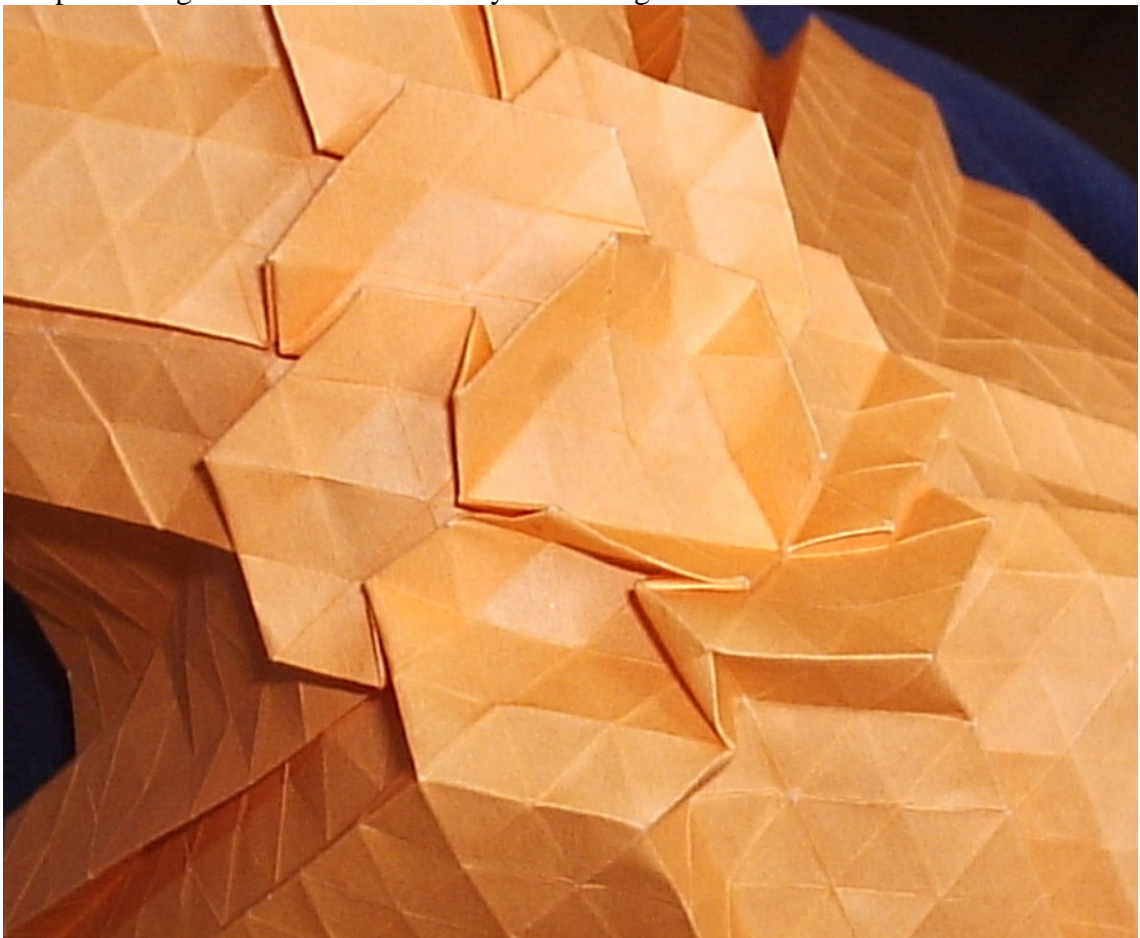

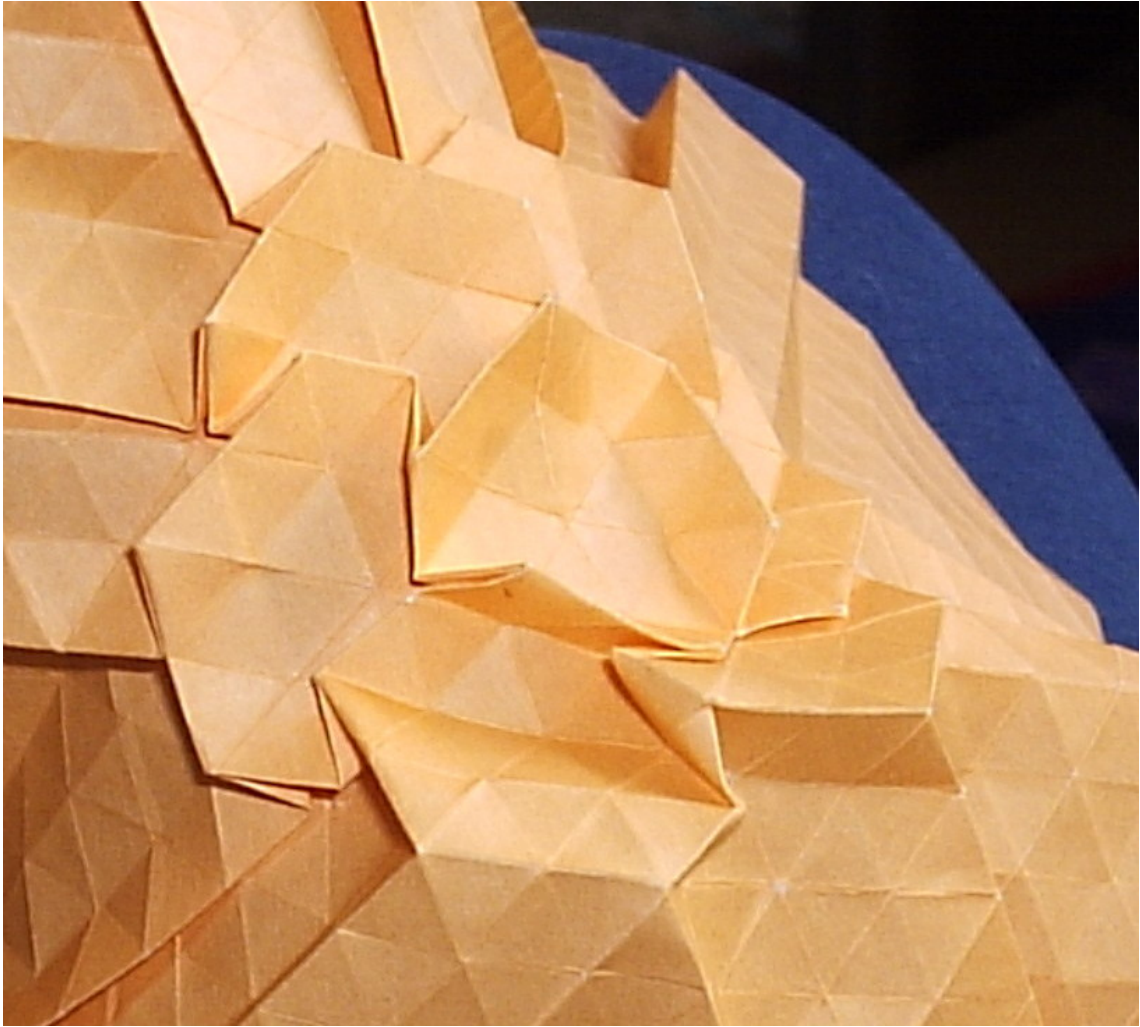

Keep on inverting pleats:

Keep on doing that until the second layer of hexagons is done:

Do the next layers as you did the first. It's easier to begin from one of the sides.
